Possible Problems in InsertImage.java program

- line 25 should write to param 3 not 2
- line 24: possible index out of bounds
- line 17: connection might fail.
- Poor exception reporting => should print message (and not stack trace?)
- Line 25: Arbitrary! non-image files are put into database
- Line 27: System.out not flushed
- Line 19: database may not have Image table
- Line 29-31: some close statements may be skipped.  Use finally.

**Possible Solutions to Cost-Benefit Analysis (for Testing)**

- **Do nothing**: => 1200 bugs.  Let the users find them!
- **All system testing**: 50 hours of manual testing finds 500 bugs.  Leaves 700.
- **All unit testing**: => 5 modules * $1000 => find 300 bugs.  Leaves 900.
- Note to self: In future: do unit testing DURING development!
- **Mix**: $3000 on unit testing (finds 180 bugs), $2000 system testing (finds 200 bugs).  This leaves 1200-380 – 820 bugs.  Not optimal, but has the advantage that we find the most common system bugs, and also develop some unit tests that can be re-used in future releases...
